Achieving Integrated Care:
15 best practice actions
Contents

Introduction 4

15 Best practice actions 6

Realising person-centred coordinated care 7

Building place-based care and support systems 17

Leading for integration 27
Introduction

The Local Government Association (LGA) and the Social Care Institute for Excellence (SCIE) have joined up to produce an accessible and practical resource that supports local systems in fulfilling their ambition of integration. From experience working with local systems, we know that the journey towards integrated care takes the commitment of time, energy and resources from all local partners. Change can be slow, with setbacks common, but there are a handful of actions local leaders can take to accelerate progress.

The fifteen actions prioritised in this resource draw on evidence about what works from international research, emerging best practices and engagement with our own stakeholders and partners. The actions are deliberately aligned with national policy, legal frameworks and regulatory guidance, but most important, they allow for local variety in system design and service delivery to flourish. Although voluntary, they also complement the existing tool; the High Impact Change Model.

Purpose

We envisage a “whole system” approach in taking these actions forward, involving system leaders, health and social care commissioners and providers, front-line professionals, local communities and local people. By applying these actions, local partners will be able to focus on three key elements:

- The delivery of person-centred coordinated care – i.e. the core objective of integrated care
- The building of local “place-based” care and support systems
- System leadership for integration

For each action, the resource sets out the rationale, ‘How to’ tips, and signposts to the underpinning evidence and examples of good practice.

The principles underpinning the actions

A number of core principles underpin the fifteen actions. First, integration is not the end goal in and of itself. Instead, it is a means towards achieving the goal of better, joined up care. Integration creates the opportunities for transforming people’s experiences of care from disjointed to coordinated, reactive to proactive, and service-orientated to personalised. Effective integration should enable people to live healthy and independent lives, and care planning and coordination should build on an individual’s strengths and preferences. We have adopted some of the ‘I/We’ statements from Think Local Act Personal’s ‘Making It Real’ framework to further highlight the way in which a particular action relates to the expected outcomes for both people who use (“I” statements) and people who provide (“we” statements) a service.
Integration should also support the building of community capacity for prevention, early intervention and “place-based” care and support. ‘Place’ is an integral aspect of the best practice actions, but we recognised that the concept of place will mean different things in different contexts. Therefore, we suggest “place” be defined by local partners and used flexibly to accommodate a range of geographic footprints and population sizes. For example, in some instances, place may mean as small as a neighbourhood; in others it will reflect the political boundaries of a local authority; and in some instances place will defined as regional. The principle for defining place should be one that optimises collaboration between local partners - and where there is a clear purpose for working and across organisational or institutional boundaries.

Finally, this tool is designed to support improvement and not performance management. Our consolidation of key sector research and best practice examples is intended to help local systems identify areas for improvement and introduce sound approaches for accelerating progress or tackling the barriers to better care. In particular, the resource draws on:

- SCIE Logic Model for integrated care
- Shifting the Centre of Gravity
- ‘Making it Real’ framework
- NHS Long Term Plan
- NHS England Integrating Better
- NHS Comprehensive personalised care model
- Better Care Fund guidance
- The Care Act 2014
# 15 Best Practice Actions

</tr>
<tr>
<td><strong>5. Rapid response</strong>&lt;br&gt;Through a single-point of access, provide access to integrated rapid response services for urgent health and social care needs</td>
<td><strong>10. Partnership with voluntary, community and social enterprise (VCSE) sector</strong>&lt;br&gt;Foster partnerships to develop community assets to provide easy access to a wide range of support</td>
<td><strong>15. Workforce planning</strong>&lt;br&gt;Lead system-wide workforce planning to support delivery of integrated care</td>
</tr>
</tbody>
</table>
1. **Risk Stratification:** Identify the people in your area who are most likely to benefit from integrated care and proactive and preventative support

**Why take this action?**
To increase the effectiveness and efficiency of integrated care and proactive support.

**Who?**
Integrated care leads, supported by public health and data analysts (GPs, care coordinators, nursing and social care - to apply needs assessment criteria reliably).

---

---

**How to achieve it**

- Use local population information from health and social care databases to identify cohorts of people “at risk” of dependency, often with multiple or complex long term conditions, and/or with high needs for care and support. Risk stratification and population management tools categorise people according to the severity of their needs.
- Usually, these individuals will be known to multiple agencies, and can be identified through need assessments, such as for frailty, or because they frequent A+E, hospital discharge or other services. Consider offering training to ensure assessment criteria are applied reliably.
- Informal information from voluntary services can also enhance local knowledge about people’s needs.
- Analytics and modelling, using good quality data, also generate insights into demand or potential for early intervention services, from falls prevention to tackling social isolation.

---

---

**‘Making it Real’- I/We statement**

“I can live the life I want and do the things that are important to me as independently as possible.”

“We work in partnership with others to make sure that all our services work seamlessly together from the perspective of the person accessing services information or advice if needed.”
Evidence and tools

- **Risk Stratification Assurance Statement** (NHS England, 2016) – an action plan template, to be completed by CCGs/GPs, to demonstrate they or their risk stratification tool providers meet the CAG approval conditions, as set out in the Risk Stratification Assurance Statement.
- **Enhancing risk stratification for use in integrated care** (BMJ, 2016) – sets out findings of a retrospective cohort study showing that segmentation can help tailor and target integrated care programmes.

Case studies

- **Risk stratification: Learning and Impact** (NHS England, 2017) – describes how a selection of vanguards have used risk stratification and predictive models in ways that are broadly consistent with the national policy direction.
- **Use of social care data for impact analysis and risk stratification: Sunderland CCG** (NHS England, 2014) – discusses the work done by Sunderland CCG and others in the use of social care data in combination with health data for risk stratification of patients and impact analysis for proposed changes.
2. **Access to information**: Ensure individuals and their carers have easy and ready access to information about local services and community assets; and that they are supported to navigate these options and to make informed decisions about their care.

**Why take this action?**

One of the challenges in any care system is to link people to the local services that matter most to them, especially in a complex system that can be difficult to navigate.

Providing good access to information, and navigation support, will facilitate people’s involvement in their own care planning, informed decision-making, prevention and social prescribing, and the personalisation of care.

**Who?**

Local commissioners should lead the development, working with a variety of local community partners.

**How to achieve it**

- Good, accessible information systems should include:
  - a single database for the directory of local services
  - comprehensive listings of a variety of local services, from statutory to voluntary, and that offer care at home and in the community
  - an easily accessible “front door”, or single point of access, combining both telephone and online portals
  - resources for maintaining and updating the directory on a regular basis.
- “Navigators” or “community link workers” can offer support and guidance for those seeking services to help them to make an informed decision about their care.
- Creating the comprehensive directory requires a shared commitment across a local community with a broad range of partners. This includes commissioning its development and delivery, and the commissioning and training of care navigators.
- It is critical to think beyond statutory services and to map the full range of local community assets, from housing support to prevention services offered by the voluntary and community sector.

---

‘Making it Real’ - I/We statement

“I can get information and advice that is accurate, up to date and provided in a way that I can understand.”

“We provide information to make sure people know how to navigate the local health, care and housing system, including how to get more information or advice if needed.”
Evidence and tools

- **Social prescribing and community-based support** (NHS England, 2019) – focuses on social prescribing, which enables all local agencies to refer people to a link workers, connecting people to community groups and agencies for practical and emotional support.

- **The Community Mapping Toolkit** (Preston City Council) – helps community groups map assets in their local area and develop their own neighbourhood action plans.

- **Supporting integration through new roles and working across boundaries** (King’s Fund, 2016) – suggests that new roles to support integrated care and better navigation through the system by working across organisational boundaries are only effective when they are part of a system-wide process of integration – valuing and reinforcing professional and organisational identities can help to develop trust and recognition, which can, in turn, facilitate closer team-working across organisational boundaries.

Case studies

- **Wigan community link worker service evaluation** (Innovation Unit, 2016) – an evaluation of Wigan Community Link Worker Service, suggesting the service has made a difference in the lives of its clients and the difference – client stories suggest that CLWs help people ‘get back on track’, feel supported and become involved and able to contribute in their community.
3. Multidisciplinary team (MDT) training: Invest in the development and joint training of MDTs to transform their skills, cultures and ways of working

Why take this action?

Team members work across organisational and professional boundaries, so they need to acquire new skills, adapt their ways of working and facilitate communication. Joint training facilitates a shared culture and practice.

Effective MDTs develop over time and with experience. Collaborative cultures, trusting relationships and reflective team learning are at the heart of team working.

Who?

Local commissioners to arrange the training; MDTs to participate.

How to achieve it

- A sustained investment in team development and joint training is essential, as it helps foster and secure the practices and protocols that underpin delivery of integrated care and better care outcomes.
- Topics for joint training include:
  - standardised approaches for joint assessment, care planning, care coordination, care management, and crisis response
  - making the shift from reactive to proactive and preventive care
  - working with shared care records, and information sharing
  - understanding and accessing the resources available for personal care plans, including personal budgets
  - personalisation and co-production methods, including shared decision-making
  - team development to improve working relationships and behaviours, joint problem-solving, shared accountability
  - involvement of link workers (care navigators) to support self-care and social prescribing.
- Co-location of team members has been shown to enhance the ability of teams to communicate and collaborate.

‘Making it Real’ - I/We statement

“I can get information and advice that is accurate, up to date and provided in a way that I can understand.”

“We provide information to make sure people know how to navigate the local health, care and housing system, including how to get more information or advice if needed.”
Evidence and tools

- **Delivering integrated care: the role of the multidisciplinary team** (SCIE, 2018) – outlines the role of MDTs as an effective means to deliver holistic, person-centred and coordinated care and includes examples of good practice.
- **What are the key factors for successful multidisciplinary team working?** (CordisBright, 2018) – identifies common features of successful multidisciplinary teams working in integrated care.
- **MDT development: Working toward an effective multidisciplinary/multiagency team** (NHS England, 2014) – brings together information about multi-disciplinary and integrated teams and looks at the types of teams that need to be in place to deliver integrated care.
- **Integrated primary care and social work: a systematic review** (JSSWR, 2018) – a systematic review of the evidence suggesting that integrated primary care provided by interprofessional teams that include social workers improves the behavioural health and care of patients.

Case studies

- **Delivering integrated care: MDTs case studies** (SCIE, 2018) – shows that there are different ways to support groups of professionals and practitioners to collaborate successfully. Lincolnshire and Manchester have brought together those working within an identified locality into an MDT. Stockport has instead maintained single-discipline teams but enabled collaboration through shared principles, joint training and an emphasis on innovation and improvement.

### Multidisciplinary Teams (MDTs)

MDTs are the health and social care professionals who are jointly responsibly for assessing, planning, managing and coordinating the care and support that best meets the needs of individuals. These teams tend to include a local social worker, nurse, doctor/GP, and therapists – and possibly others like care navigators or link workers.
4. **Personalised care plans:** Develop personalised care plans together with the people using services, their family and carers

**Why take this action?**

Care planning that directly involves individuals and those who care for them is more likely to produce plans that build on the person’s own strengths and assets, support shared decision-making, and meet the person’s care goals.

**Who?**

Integrated care leads, clinical leaders and “users by experience” (to co-develop standards and practices).

- Commissioners to facilitate learning programmes for MDTs and other assessors.
- Local system leaders to tackle barriers.

**How to achieve it**

- When care is personal, the focus is placed on the individual at the centre of their care – the whole person – and understanding that they know best what their needs are and how to meet them.
- The starting point is the person’s own strengths and goals, with care planning directly involving the person in the process. Whoever is assessing needs and developing plans must adopt this guiding principle.
- Realising the ambition of personalised care requires a cultural shift. As covered in action 3, training of multi-disciplinary teams and other assessors is needed to ensure that the expected standards and practices become adopted and second nature. Learning programmes should cover:
  - best practices for involving people in care planning and setting care goals
  - how to plan for prevention and self-care along with traditional services
  - supporting shared decision-making, patient activation, motivational interviewing, and other techniques
  - how to involve people’s families and caregivers in the planning process.
  - Personalised care planning is best facilitated by an effective and accessible system of shared care records, one that incorporates standardised documentation practices.
- A personalised care plan is more than just the technical output of an assessment – it should encompass the quality of these plans from the perspective of the person. Finding ways for practitioners to receive feedback will support better care and improvements in future planning.
- Plans must be reviewed on a regular basis, since people’s needs and goals will change over time as their underlying conditions and personal circumstances change.

**Making it Real - I/We statement**

“I have a co-produced personal plan that sets out how I can be as active and involved in my community as possible.”

“We talk with people to find out what matters most to them, their strengths and what they want to achieve and build these into their personalised care and support plans.”
Evidence and tools

- **Personalised care & support planning** (TLAP) – through a series of case study scenarios, the tool shows what different journeys through personalised care and support planning could look like when delivered through integrated and person-centred arrangements.

- **Personalised care and support planning** (LGA & NHS England, 2017) – sets out practical guidance on how to develop and implement a single personalised care and support plan, develop multidisciplinary approaches and put in place a single, named coordinator.

- **What to expect during assessment and care planning** (SCIE & NICE, 2018) – describes what people should expect from social care staff during assessment and care planning, covering making decisions; support from an advocate; needs assessment; and care planning.

- **Using conversations to assess and plan people’s care and support** (Skills for Care, 2018) – outlines the key principles of conversational assessment, which are aligned with the principles and values of Think Local Act Personal, and support the Making it Real framework.

Case studies

- **Assessment and care planning: 3 conversations** (SCIE, 2017) – describes the ‘3 conversations’ model, an innovative approach to needs assessment and care planning which focuses primarily on people’s strengths and community assets.

- **Digital care and support plan standard: case studies** (PRSB, 2018) – examples of implementation of a standard for digital care and support plan, so that care plans can be effectively shared between patients, carers and all the health and care professionals involved.
5. **Rapid response:** Through a single-point of access, provide access to integrated rapid response services for urgent health and social care needs

Why take this action?

Having an effective crisis response in the community helps to stabilise changing conditions, keep people at home and avoid unnecessary emergency hospital attendances and admissions.

Who?

Commissioners, working with local partners.

- (As described in the NHS Long Term Plan, all CCGs within an Integrated Care System should be aiming for a single approach to urgent community care.)

---

### Making it Real - I/We statement

**I** know what to do and who I can contact when I realise that things might be at risk of going wrong or my health condition may be worsening.”

“**We** work with people to write a plan for emergencies and make sure that everyone involved in supporting the person knows what to do and who to contact in a health or social care emergency. We make sure that any people or animals that depend on the person are looked after and supported properly.”

---

### How to achieve it

- Commissioning an effective single point of access with 24/7 hour coverage enables an effective rapid response system to be deployed for people whose care needs require urgent attention:
  - a clear model of care and agreed protocols, including referral and escalation pathways, for handling urgent and emergency care needs that arise from the targeted population, whether they are people living at home, in care homes or elsewhere in the community
  - a fully integrated rapid response team, ideally available 24/7, delivered by a range of health and social care professionals with access to specialist medical expertise, as needed, who can triage and attend to the individual’s urgent needs
  - a single point of access – usually telephone triage in a physical hub – from which to coordinate the rapid response, and which is linked to a shared care record system.

- The community-based urgent care system is suitable for any person at high risk of entering a crisis. This includes anyone receiving integrated care at home or in the community, care home residents, those who frequently attend hospital emergency care, or people recently discharged from hospital.
Evidence and tools

- **Urgent and Emergency Care Consolidated Channel Shift Model: User Guide** (NHS England, 2018) – describes the channel shift model whereby urgent and emergency care interventions shift activity to the most appropriate setting of care and away from less appropriate settings of care.

Case studies

- **Learning the lessons from integrating urgent response, short term rehabilitation and reablement services to create Intermediate Care Southwark** (IPC, 2018) – summarises the challenges and lessons learned during the development of a new service which brings together under shared management arrangements four separate services: Southwark Enhanced Rapid Response Service, Southwark Supported Discharge Team, Reablement Service and the social work urgent response function.

- **Avoiding A&E through Rapid Response teams and See and Treat Models** (NHS, 2016) – brings together 12 case studies from both the UK and Internationally and provides details of quantified impact.

- **Rapid Response Service: Central and North West London NHS Foundation Trust** (Monitor, 2015) – describes how the service enables patients who are entering crisis to remain supported in their home or the community, rather than be admitted to hospital, or return home as soon as possible.
6. **Operational framework**: Create an integrated care operational framework that is right for the local area, and which aligns service delivery and service changes to a clear set of benefits for local people

**Why take this action?**

Moving from a shared vision for the new local system to real change requires collaborating with providers to have a shared operational framework and performance goals.

**Who?**

Joint commissioners and integrated care leads, working with local providers.

---

**Making it Real- I/We statement**

“I have care and support that is coordinated and everyone works well together and with me.”

“We work in partnership with others to make our local area welcoming, supportive and inclusive for everyone.”

---

**How to achieve it**

- Operational frameworks translate system leaders’ vision and strategy for integrated care to local place-based care and support systems. An operational framework will be unique to each local area; it is not a “one size fits all” approach.
- Aiming to meet the needs of local people, and staying people-centred in focus, the framework should describe: how care will be organised and provided; how outcomes will be achieved, such as through local care networks and care pathways; the range of services available; and how prevention and early intervention are incorporated into the offer.
- It should be co-produced by local providers, frontline staff and local people, so as to ensure:
  - the framework maximises the potential and capacity of local assets and resources, including the voluntary and community sector
  - prevention and early intervention services are incorporated into the plan
  - engagement with frontline staff and local people maintains a focus on the development and innovation of local services
  - there is support for new ways of working, and that any structural or behavioural changes are understood
  - frontline staff will have the autonomy and freedom to work together.
Evidence and tools

- **Shifting the centre of gravity: Making place-based, person-centred health and care a reality** (LGA, 2018) – sets out a vision and the actions that will help local systems and places to progress their work on system-wide transformation.
- **NHS Operational Planning and Contracting Guidance 2019/20** (NHS, 2019) – covers system planning, the financial settlement, full operational plan requirements, and the process and timescales around the submission of plans.

Case studies

- **Frimley System Operating Plan 2019/20** – describes the collective priorities and actions for the providers, commissioners and local authorities that make up the Frimley Health and Care Integrated Care System (ICS).
- **Integrating health and social care: Rotherham case study** (LGA, 2018) – describes Rotherham’s progress developing integrated care arrangements, including an Integrated Health and Social Care Place Plan.
- **Integrating health and social care: North East Lincolnshire case study** (LGA, 2018) – describes North East Lincolnshire’s progress developing integrated care arrangements at place level through the Union’s Partnership Board, which provides single strategic leadership across the CCG and the Council.
- **Integrating health and social care: Dorset case study** (LGA, 2018) – describes Dorset’s progress developing a joined up approach to providing care for the local population.
7. **Integrated commissioning:** Use integrated commissioning to enable ready access to joined-up health and social care resources and transform care

**Why take this action?**

The experience of care is more likely to be seamless where local providers and practitioners share accountability for care outcomes, the best use of joint resources and the management of risks.

- Integrated or joint commissioning enables shared accountabilities and practices to work effectively.

**Who?**

Commissioners.

**‘Making it Real- I/We statement’**

**I** can live the life I want and do the things that are important to me as independently as possible.”

**We** work in partnership with others to make our local area welcoming, supportive and inclusive for everyone.”

**How to achieve it**

- A single team of joint commissioners, ideally co-located, can better leverage the co-ordination, pooling or alignment of local resources to create improved outcomes and experiences from integrated health and social care. (See also action 11 and action 13.). Their work is underpinned by the local integrated care vision.

- The options for integrated commissioning are:
  - section 75 agreements between CCGs and councils that create permission to pool or align NHS and social care funds
  - contracts with providers, including lead providers, which include risk-reward incentives and clear outcomes and performance metrics.

- Commissioners cannot work solely in a transactional way. Instead, dialogue with local providers, clinical professionals and service users should be used to shape the delivery of the service model and full range of integrated care services, from prevention to urgent care in the community.

- Commissioners may need support to develop their negotiation, influence and engagement skills.
Evidence and tools

- **Options for Integrated Commissioning** (King’s Fund, 2015) – assesses evidence of past joint commissioning attempts, studies the current policy framework and local innovations in integrated budgets and commissioning, and considers which organisation is best placed to take on the role of single local commissioner.
- **Health Foundation: Need to Nurture** – an examination of outcomes-based commissioning to date.
- **The Personalised Health and Care Framework** – guide for LAs and CCGs shows how they can use Integrated Personalised Commissioning and personal health budgets as key ways for providing people with a more personalised approach to their health and social care.

Case studies

- **North East Lincolnshire CCG: Strategic Plan 2014-2019** – acts as lead commissioner for all health and social care services (section 75 agreement).
- **Sheffield Council and CCG** – have established a joint commissioning and management structure utilising section 75 agreement for some service pathways.
- **Torbay Care Trust** – has pooled budgets for health and social care services, including a fully integrated model that provides care for the elderly and people with diabetes through a single-point-of-contact co-located MDT system (used by NW London as a case study).
- **Salford Integrated Care Programme** – the council, CCG and NHS trust formed an alliance bringing together commissioners and providers to enable the provision of more integrated care and services and to share risk.
8. **Shared records:** Identify and tackle barriers to sharing digital care records to ensure providers and practitioners have ready access to the information they need

**Why take this action?**

Information sharing supports care planning, care coordination, proactive and urgent care management, as well as the personalisation of care, and workforce and service planning. What gets in the way are behaviours and assumptions about how to share data legally and functionally.

**Who?**

System leaders.

**Making it Real - I/We statement**

“*I* know how to access my health and care records and decide which personal information can be shared with other people, including my family, care staff, school or college.”

“We get permission before sharing personal information.”

**How to achieve it**

- Access to shared care records is an important enabler of integrated care. A relentless focus on eliminating the barriers to data access and data sharing will accelerate local progress. To do this well, requires:

  - committed leadership, supporting culture change, openness and collaboration – beyond just introducing new technology – to reimagine work processes, professional interactions and the engagement of service users
  - strong information governance, including through formal information-sharing agreements and partnerships – acknowledging that users of services generally assume information is already shared
  - interoperability and standardisation, ensuring IT systems are able to communicate across settings and organisations
  - a focus on the relevance and quality of data
  - staff skills development and clear guidance to ensure consistent compliance with data protection laws and the wider regulatory framework
  - processes in place to ensure customisable sharing, tailored to the person’s consent and service needs
  - user-centred design, developing the facility for people to have access to their own records
  - analytic capacity and capability to extract insights and monitor outcomes.
Evidence and tools

- **NHS Digital: Information Governance Alliance** – publications to enable effective information sharing.
- **Centre of Excellence for Information Sharing** – resources a series of tools to help local areas address the cultural barriers to information sharing.

Case studies

- **Leeds** and **Bristol / South Gloucestershire / North Somerset** – shared care record approaches and the improved sharing of information for the direct care of individuals.
- **Harrow** and **Living Well Essex** platform approaches and digital channels by which citizens can engage in care and health services.
- **Leicester, Leicestershire and Rutland** – sharing of information to analyse the journeys taken by local people across the whole health and care system to help inform commissioning.
9. **Community capacity**: Build capacity for integrated community-based health, social care and mental health services, focusing on care closer to home

**Why take this action?**

To support people to maintain their independence and prevent unnecessary hospital or institutional care, it is important that there is capacity within community-based services to support prevention, early intervention, rehabilitation and reablement.

**Who?**

Commissioners, leaders from local statutory providers, including clinical leaders, and local people.

- (As described in the NHS Long Term Plan, the evolution of Primary Care Networks (PCNs) should align with these principles).

**Making it Real - I/We statement**

“I can live the life I want and do the things that are important to me as independently as possible.”

“We have a clear picture of all the community groups and resources in our area and use this when supporting people and planning services.”

**How to achieve it**

- An objective of integrated care is to provide services to people closer to home – or at home. This means developing a greater array of preventive, therapeutic and rehabilitative services in the community.

- This requires the redesign of care pathways and the creation of new or expanded community-based services. Some services could be designed for delivery at home, and others might be accessed at a neighbourhood “hub”, which could provide primary care, community health, mental health, social care and voluntary sector services all in one place. Access to specialist care would support the management of long term conditions and urgent care, while an expanded offer of reablement would help people prevent unnecessary admission to hospital or care settings.

- Commissioners should involve local people, their families and carers, as well as health and social care providers, in their planning efforts, so that the resulting services are better tailored to local context and priorities.
Evidence and tools

- **Reimagining community services: Making the most of our assets** (King’s Fund, 2018) – focuses on services in the community, comprising both services commissioned by the NHS and local authorities as well as related services delivered by the third sector, the private sector, carers and families. The report proposes ten design principles that should inform the future planning and provision of community-based care.

- **Primary care home and social care: working together** (NAPC & ADASS, 2018) – describes the importance of closer integration of social care with primary care to achieve better outcomes for users of services and local populations and highlights the value of the primary care home model as a framework for making this happen at scale and consistently throughout the country. Includes case studies.

Case studies

- **Integrated care for older people with frailty: Innovative approaches in practice** (RCGP & BGS, 2016) – case studies providing innovative and interesting ideas about the care of older people in a range of locations across the UK, including urban and rural populations, and a range of settings, including services based in the community, in GP practices, in care homes and in hospitals.

- **Primary care home and social care: working together. Case studies** (NAPC & ADASS, 2018) – includes four case studies illustrating how partnerships between health and social care work in practice, the impact they have and their success factors.
10. **Partnership with voluntary, community and social enterprise (VCSE) sector:** Foster partnerships to develop community assets that offer a wider range of services and support

**Why take this action?**

Actively cultivating partnerships with local voluntary services, housing associations and other community organisations will broaden the range of services people are able to access to keep them independent and well, such as services that support prevention, self-care and social prescribing.

**Who?**

Commissioners working with the VCSE sector and local people.

**How to achieve it**

- An objective of integrated care is to provide services to people closer to home – or at home. Limiting these services to statutory health and care ignores the often rich “assets” of the local VCSE providers, often already serving local people.
- Think broadly about how to partner with the VCSE sector to develop community-based services, support and interventions that focus on prevention, self-care, independence and wellbeing.
- Commissioners, working in partnerships, can:
  - reframe the narrative about people and communities – shifting the emphasis from deficits and needs, to strengths and assets, creating the right environment for community engagement
  - reinforce an ethos of co-production, taking a co-design approach to develop the services people want, and focusing on wellbeing, prevention and self-care
  - include voluntary-led services in local service directories to support personalised care planning
  - connect people to the wealth of local community resources and initiatives through a clear and intuitive signposting, social prescribing, peer mentors, link workers and care navigators
  - support and encourage the full offer of schemes and programmes run by the voluntary sector, including Shared Lives, community circles, time banks, etc.
Evidence and tools

- **Asset-based places: A model for development** (SCIE, 2017) – suggests a framework for local areas to enable asset-based approaches to thrive.
- **The Asset-Based Area** (TLAP, 2017) – sets out ten key features of an asset-based area and suggests a number of planning and support models that can help areas to make progress.
- **Social prescribing and community-based support** (NHS England, 2019) – enables increased understanding of what good social prescribing looks like and why social prescribing improves outcomes, commissioning of local social prescribing connector schemes, and collaborative working amongst all local partners at a ‘place-based’ local level.
- **Commissioning community development for health** (Coalition for Collaborative Care, 2018) – aimed at helping local authorities, CCGs, federations and sustainability and transformation partnerships (STPs) footprints to commission community development.

Case studies

- **Integrating health and social care: Croydon case study** (LGA, 2018) - describes Croydon’s progress developing integrated care arrangements, including through the creation of Local Voluntary Partnerships which will be vital in organising and supporting the voluntary and community sector offer, so that initiatives such as social prescribing and the Integrated Community Networks know who they can signpost and refer people to for help in their communities.
- **ConnectWELL** (SCIE Prevention Research and Practice) – describes a social prescribing service in Rugby, which provides health professionals with just one, straightforward referral route to the many Voluntary and Community Sector organisations, groups and activities that can help manage or prevent compounding factors of ill-health.
11. **Common purpose:** Agree a common purpose and a shared vision for integration, including setting clear goals and outcomes

**Why take this action?**
A clear shared vision and common goals help develop integration and support the necessary behavioural changes for achieving better health and wellbeing outcomes.

**Who?**
System leaders, building on current local arrangements.

**How to achieve it**
- Without a common purpose and shared vision, integrated care will fall at the first hurdle, with commissioners and providers not working collaboratively towards the same goals.
- It is vital for local system leaders to re-affirm their local vision for integrated care and the goals and outcomes expected for their local systems. This involves:
  - working together to align priorities and responsibilities, including overcoming cultural and performance challenges to establish a common language and set of objectives
  - co-designing and co-producing goals and solutions with those who receive health, care and support
  - building commitment, ensuring leadership is shared and rooted deeper within organisations, engaging middle managers, multidisciplinary team leads and frontline staff in their thinking
  - setting medium and long-term milestones, ensuring vision and goals are tangible, well-defined and measurable.

---

**Making it Real- I/We statement**

"I have care and support that enables me to live as I want to, seeing me as a unique person with skills, strengths and personal goals."

“**We** work in partnership with others to make sure that all our services work seamlessly together from the perspective of the person accessing services.”

Evidence and tools

- **Stepping up to the place: integration self-assessment tool** (LGA, NHS Confed, ADASS, NHSCC, 2016) – this self-assessment tool is designed to support local health and care leaders to critically assess their ambitions, capabilities and capacities to integrate services to improve the health and wellbeing of local citizens and communities.

- **The King’s Fund: Population health systems: Going beyond integration care** (King’s Fund, 2015) – aims to challenge those involved in integrated care and public health to ‘join up the dots’, seeing integrated care as part of a broader shift away from fragmentation towards an approach focused on improving population health.

- **The King’s Fund: Place-based systems of care** (King’s Fund, 2015) – proposes that organisations need to establish place-based ‘systems of care’ in which they collaborate with others to address the challenges and improve the health of the populations they serve.

- **The journey to integration: Learning from seven leading localities leadership section, p51 -54** (LGA, 2016) – shows that development and ownership of a vision is critical across the area, and strong leadership across the area’s organisations is essential to maintain focus and mitigate against the risk of change in leadership and loss of momentum.

Case studies

- **NHS Providers: Birmingham Community Healthcare NHS Trust: Healthy villages and the complete care model** – Complete Care is a new model of delivering integrated services for older adults, and is part of the wider Healthy Villages programme.

- **Integrating health and social care in Torbay: Improving care for Mrs Smith** (Kings Fund, 2011) – shows how integration evolved from small-scale beginnings to system-wide change.

- **Bexley’s Local Care Partnership MOU** (Requires FutureNHS log-in) – sets out the vision and values for partners coming together in a Local Care Partnership.
12. **Collaborative culture:** Foster a collaborative culture across health, care and wider partners

**Why take this action?**

Integrated care systems require people to work across organisational and professional boundaries to achieve success. This requires significant culture change.

- A system-wide organisational development strategy that fosters collaboration at all levels is suggested.

**Who?**

System leaders.

**Making it Real - I/We statement**

“I have care and support that is coordinated and everyone works well together and with me.”

“We have a ‘can do’ approach which focuses on what matters to people and we think and act creatively to make things happen for them.”

**How to achieve it**

- Without a common purpose and shared vision, for system leaders, creating a joint strategy for organisational development will set the parameters for the culture changes expected at all levels of the system. How system leaders act and behave will demonstrate these expectations in practice.

- The focus should be to develop mutual understanding and collaborative ways of working, including building capacity for tackling the “stickiest”, most intractable challenges that arise when different organisations or groups of people work together.

- System leaders have the power to address:
  - accountability for decision-making at the most appropriate level – system, place, neighbourhood or individual
  - sharing accountability for the use of joint resources
  - facilitating opportunities for staff from different disciplines to understand each other’s roles and professional identities, building trust, relationships and joint ways of working – including through co-location where appropriate
  - creating opportunities for professionals from multiple settings and agencies to learn from each other and plan solutions and interventions together
  - developing integrated training opportunities, including offering rotational placements in different sectors
  - facilitating information sharing, including shared access to care records.
Evidence and tools

- **Developing a Competent Workforce for Integrated Health and Social Care: What Does It Take?** (International Journal of Integrated Care, 2016) – paper that discusses the workforce competencies needed for integration and ways to support staff to work in an interdisciplinary and integrated environment.

- **System wide collaboration? Health and social care leaders’ perspectives on working across boundaries** (Journal of Integrated Care, 2019) – a paper to understand the experiences of working across organisational and sectoral boundaries for the benefit of the population.

- **Stepping up to the place. Part B: Evidence review** (IPC, 2018) – looks at barriers and enablers of integrated care practice, including the roles of cultures and behaviours.

Case studies

- **Thanet Health Community Interest Company Primary Care Home** (NHS Confederation, 2017) – describes how health and social care organisations in Thanet came together to pool resources on a voluntary basis and build an integrated, accountable care organisation to improve care for frail elderly people and reduce demand.

- **Dorset Council: getting providers working as one** (LGA, 2019) – Dorset Council has got its providers working collaboratively, resulting in less fragmentation, improved services for patients and greater emphasis on prevention.
13. **Resource allocation:** Maintain a cross-sector agreement about the resources available for delivering the model of care, including community assets

**Why take this action?**
Commissioning should be underpinned by firm shared agreements for how resources will be allocated in relation to outcomes, and how outcomes will be monitored. This should help to reduce or resolve competing financial incentives within the current system.

**Who?**
Systems leaders and commissioners of health and social care.

**How to achieve it**
- Some of the barriers to integrated care are financial, namely how resources align with the expected model of care; how they are made available to local providers through contracts; how joined up they are in terms of outcomes and contractual incentives; and whether the lines of accountability for delivery of value and outcomes are clear.
- System leaders that actively address resource challenges and maintain cross-sector agreements will create greater scope for success. They need to:
  - define the shared budget available for the population groups targeted in each local place and in line with the model of care
  - agree how resources will be aligned or pooled, along with the legal and governance arrangements, including cross-sector agreements
  - identify the types of contractual models and financial incentives that will be used for managing provider contracts
  - ensure the incentives within the contracts correspond with the outcomes and service changes expected.

**Making it Real- I/We statement**

“I have care and support that is coordinated and everyone works well together and with me.”

“We work in partnership with others to make sure that all our services work seamlessly together from the perspective of the person accessing services.”
Evidence and tools

- Stepping up to the place. Part B: Evidence review (IPC, 2018) – looks at barriers and enablers of integrated care practice, including financial arrangements, shifting money across the system and budget sharing mechanisms.

- Integrating funds for health and social care: an evidence review (JHSRP, 2015) – examines whether integrated funds have the potential to facilitate coordinated care, noting that integration may uncover unmet needs – thus offering value for money even with additional costs.

Case studies

- Integrating health and social care: Dorset case study (LGA, 2018) – describes Dorset’s joined-up CCG and County Council approach to proactive care market management, integrated commissioning, brokerage and a contract framework – the ‘Dorset Care’ – initially focusing on home and community services for older people and is now extending into learning disability and mental health services.

- Integrating health and social care: North East Lincolnshire case study (LGA, 2018) – offers an example of an advanced whole system approach, underpinned by a shared vision for the ‘place’ and led by the ‘Union’ of the Council and CCG, which drives a joint approach to commissioning, service delivery and financing to the point that integrated working is seen as business as usual.
14. Accountability: Provide system governance and assure system accountability

Why take this action?
As part of their public governance role, system leaders should regularly be monitoring progress and evaluating the outcomes and benefits of integrated care.

Key is demonstrating that integrated care is making a difference to local people and that resources are being used appropriately.

Who?
Local system leaders.

How to achieve it

• Most local systems have good foundations for assuring system accountability, but the continued evolution of integrated care systems will challenge these foundations and require strengthening – for example working over geographies larger than those for local political accountability for social care. Forging productive, trusting working relationships, building on existing arrangements, will continue to be an important activity for local system leaders.

• Effective governance structures and processes will need to enable local priorities to be met by high-quality services and adequate resources; that decision-making is transparent and publicly accountable; that local populations have equitable access to care and support; and that the cultural changes associated with integrated care are fully realised.

• Local systems may need to stress test their current governance arrangements and introduce important changes, reviewing the following important factors:
  • governance arrangements that are lean, transparent and not overly burdensome or bureaucratic
  • clarity about where decision-making and resource allocation powers lie within the system, and how different decision-makers will be held accountable – and to whom
  • an accountability framework that focuses on monitoring progress, assuring quality and delivering better outcomes and value for money for local people
  • agreed ways of working for tackling barriers to integration, solving joint problems such as workforce planning, and sharing resources; any new ways of working should build on existing legal agreements and other formal arrangements (eg data sharing)
  • clarity about local people’s influence and involvement in governance and decision-making.

Making it Real- I/We statement

“I am treated with respect and dignity.”

“We make sure that our organisational policies and procedures reflect the duties and spirit of the law and do not inadvertently restrict people’s choice and control.”
Evidence and tools

- **Governance and accountability for integrated health and care** (NHS Clinical Commissioners and Centre for Public Scrutiny, 2019) – explainer for the NHS and local authorities outlines some of the key governance and accountability challenges that these organisations may face when seeking to work more collaboratively and potential solutions.

- **New care models: Emerging innovations in governance and organisational form** (King’s Fund, 2016) – looks at the approaches being taken by the NHS vanguards to contracting, governance and other organisational infrastructure.

Case studies

- **Taking charge of our health and social care in Greater Manchester** (Greater Manchester Combined Authority, 2015) – strategic plan for health and social devolution.

- **Warwickshire and Coventry’s health and wellbeing alliance concordat** – developed as the basis for joint working across the two boards.

- **Leicester, Leicestershire and Rutland: The better care together (BCT)** – overview documents for this partnership which spans three health and wellbeing board areas.
15. Workforce planning: Lead system-wide workforce planning to support delivery of integrated care

Why take this action?
A system-wide workforce strategy will ensure there is appropriate capacity and capability across all local settings to meet the ambition and goals of the local integrated care system.

Who?
System leaders, local providers from the public, independent and voluntary sectors.

How to achieve it

- System leaders should undertake workforce planning in partnership, and not in isolation, working with local provider organisations across health and care.
- Local workforce strategies should be cross-sectoral in nature, covering the public, independent and voluntary sectors. They should address:
  - existing and future recruitment needs and retention challenges
  - the state of the local labour market
  - the skills and training required to work in new settings and in new ways
  - the advent and roll-out of new roles, such as link workers or care navigators
  - the availability of local resources for workforce development and training.
- Using a whole-system approach to workforce planning will ensure local providers and commissioners are working in partnership to address workforce shortages, such as developing innovative and shared opportunities for recruitment and retention – and avoiding competition for staff. Including the independent sector in social care is of particular importance to the growth of home-based and community care and reablement.
- The strategy should reflect the need to develop an integrated workforce by creating opportunities for professionals from multiple settings and agencies to learn from each other and plan solutions and interventions together. This is likely to produce integrated training programmes and rotational placements in different sectors.
- Involvement of local education providers in the development of the workforce strategy recognises that they too play an important part in the building of local workforce capacity and capability.

Making it Real- I/We statement

“I have considerate support delivered by competent people.”

“We work in partnership with others to make sure that all our services work seamlessly together from the perspective of the person accessing services.”
Evidence and tools

- **LGA Workforce Redesign** – provides useful information on how to develop new ways of working to support an integrated workforce.
- **Defining the role of integrated care systems in workforce development: A Consultation** (NHS Confederation, 2019) – a discussion of the role of ICSs in workforce decision-making based on roundtable sessions.
- **Specialists in out-of-hospital settings: Findings from six case studies** (King’s Fund, 2014) – a report that explores the role of specialist consultants in supporting the delivery and co-ordination of out-of-hospital care. Includes information about redesigning the workforce.
- **Supporting integration through new roles and working across boundaries** (King’s Fund and LGA, 2016) – report looking at the evidence on new roles and ways of spanning organisational workforce boundaries to deliver integrated health and social care.
- **Skills for Care: Workforce integration offers** – support offer from Skills for Care, including ‘Principles of workforce integration’.
- **SCIE: Integrated care workforce resources** – useful information and resources to provide support around enabling multi-disciplinary teams (MDTs).

Case studies

- **Lessons learned from Local Systems Reviews Support Programme** (SCIE, 2018) – shares insights and learning from local systems reviews, including around system workforce planning and development.
- **How to meet population health needs through workforce redesign** (NHS England, 2017) – describe the learning about workforce integration from vanguards, integration pioneers and primary care homes and includes seventeen case studies showing the strength and richness of the journey towards workforce integration.
