

Loneliness, social isolation and COVID-19

Practical advice

Note: this advice is correct as of 21 May

Introduction

The Local Government Association (LGA) and Association of Directors of Public Health (ADPH) have jointly produced this practical advice for Directors of Public Health and others leading the response to the loneliness and social isolation issues arising from the COVID-19 pandemic. It follows-on from our guidance about the public mental health impacts across the life course.¹

Intervening early to tackle loneliness and social isolation during the COVID-19 pandemic and beyond will help to prevent more costly health and care needs from developing, as well as aiding community resilience and recovery. This can only be done at the local level through partnerships between the council, voluntary and community sector, councillors, primary care networks and relevant others. Councils have a key role to play in this, because they own most of the assets where community action could or should take place, such as parks, libraries and schools, with councillors creating the localised neighbourhood partnerships to deal with a range of mental and physical health issues. There is also an opportunity to harness and develop the positive changes that we are seeing, such as greater awareness about the impact of personal behaviours on mental wellbeing.

Loneliness and social isolation impacts and risks

We can expect more people of all ages to experience loneliness and social isolation due to the impact of social distancing measures and the reduction in face-to-face opportunities to socialise, connect with family, neighbours and friends, and to take part in physical activity and everyday cultural and faith experiences.

There is an extensive evidence base about the impact of loneliness and social isolation on people's lives, their relationships and their wellbeing. It is also a serious public health concern. It leads to higher rates of premature mortality comparable to those associated with smoking and alcohol consumption – around 30 per cent higher than for the general population² and is a risk factor in developing depression.³ Public health teams in councils are already working closely with partners, especially the voluntary and community sector (VCS), to tackle loneliness and social isolation.

Whilst loneliness is often associated with social isolation, these two concepts, though linked, are distinct and will require different responses during the outbreak. For people who are already socially isolated ie they already lack the social contacts to reach out for support, being asked to socially isolate due to COVID-19, especially if they are in a clinically high-risk group and are shielding, can be difficult.

Digital exclusion is a key driver of social isolation and it is important to ensure that people without internet access, or who do not use the internet, still receive information in an appropriate format about how to access support and are helped to get online if they wish to do so. The LGA's supporting vulnerable people briefing⁴ sets out how councils are identifying and helping people who do not have access to support networks during the COVID-19 pandemic.

Even if someone is not completely socially isolated in terms of having people who are important to them and who can help them to navigate their day to day lives, social distancing rules mean that many people are missing out on emotionally fulfilling social contact and may feel lonely. Councils are working hard with the VCS and faith groups to ensure that people feel as connected as possible. Communities are self-organising and there are many imaginative responses, such as virtual pubs, choirs and concerts, that are helping to keep people connected. There is also a positive opportunity to build upon increased neighbourliness and volunteering to help strengthen community capacity and resilience.

The loneliness and social isolation impacts from COVID-19 will be experienced by people across the life course, but some will be more at risk than others and will need targeted approaches that are also sensitive to the stigma that can be associated with loneliness and social isolation. The table below summarises the main risk factors of loneliness and social isolation, many of which overlap, including those specific to COVID-19:

² 'Loneliness and Social Isolation as Risk Factors for Mortality - A Meta-Analytic Review Perspectives on Psychology', Holt-Lunstad J, Smith TB, Baker M, et al. published online 2015 <u>http://pps.sagepub.com/content/10/2/227.abstract</u>

³ 'Loneliness as a Specific Risk Factor for Depressive Symptoms: Cross-Sectional and Longitudinal Analyses', Cacioppo, Hughes, et al. American Psychological Association, 2006

Risks		Implications for local responses
Existing risk factors not directly affected by COVID-19	 Age – young people are the most likely to report feeling lonely but the largest number of people experiencing loneliness are older people Where you live – people who feel they belong less strongly to their neighbourhood report feeling lonely More often, as do those who have little trust of others in their local area Living alone – this is a key indicator of social isolation and potential loneliness and especially affects older people 	address loneliness and social isolation during and beyond the outbreak • Information to draw upon includes
Existing risk factors that might be exacerbated by COVID-19	 Caring responsibilities Experience of bereavement Poor physical and mental health Household income Pregnancy and new parents Digital exclusion Transport connectivity Relationship breakdowns both of couples and within families 	 Specific communications and interventions may need to be targeted at people at higher risk of loneliness and social isolation because of COVID-19 and the current restrictions
New and emerging risk factors as a direct result of COVID-19	 Social distancing measures Shielding for the medically extremely vulnerable, especially when people do not have access to support networks, which will likely continue once restrictions are eased for other people Those who may have to isolate as a result of tracing and tracking Impact of early years, school, college, university and workplace closures and learning/working at home Less contact with statutory services or VCS services that were accessed prior to COVID-19 and/or accessing that support in a different way Short, medium and long-term effects of contracting COVID-19 and recovering from it, including possible trauma Adjusting to the 'new normal' now that restrictions are starting to ease 	groups

Leading local responses

Many councils are already using local insight and networks, including from ward councillors, to identify people who may be isolated or experiencing loneliness during COVID-19, and to make them aware of potential support.

The LGA's Must Know⁶ guide, drawing upon work by the Campaign to End Loneliness and Age UK, sets out councils' role working with partners and using community assets to address and help prevent loneliness and social isolation. The table below shows how these core responses are being adapted to reflect the COVID-19 situation, including the positive changes that are happening.

Role of council working with local partners	Key steps to prevent and address loneliness and social isolation	Adjustments to local actions that may be required as a result of COVID-19 and opportunities to embed positive changes
1. Foundation services that provide the first steps in finding individuals who are experiencing lonely	Includes – first contact schemes, targeting people at risk of loneliness, formal social care assessments, social prescribing in primary care, home from hospital or admissions avoidance schemes, information about activity to tackle loneliness available through community settings	 Some early identification is continuing through face-to-face contact, but alternative arrangements are also being put in place Update loneliness and social isolation referral pathways, including for social prescribing, to reflect the different ways in which support can be accessed Maximise the local offer of parks, libraries, schools and other local assets in line with government guidance Make links to the Local Support System and arrangements to support people who are shielding and have other vulnerabilities Encourage front line staff to continue to identify people's wider wellbeing needs and signpost to support Use digital and non digital means to promote support to residents and frontline staff Consider the needs of priority groups such as people with a learning disability and/or autism, informal/unpaid carers, new migrants to the UK and people for whom English is not their first language

⁶ https://www.local.gov.uk/sites/default/files/documents/22.28%20-%20Loneliness%20Must%20Know_02.pdf

Role of council working with local partners	and address	Adjustments to local actions that may be required as a result of COVID-19 and opportunities to embed positive changes
2. Direct interventions focussed on helping people maintain existing relationships and develop new ones	Includes – supporting group activities such as lunch clubs and walking groups, one-to- one approaches like befriending schemes, access to psychological support for people for whom loneliness is part of broader mental health issues	 Provide clear information to people about how to use the internet and encourage younger people to help older relatives Further encourage people's greater awareness about the impact of
are people or organisations that encourage communities or individuals to engage with, and support,	Includes – VCS commissioned projects such as community navigators. Specific community approaches that support tackling loneliness include: • age-friendly, dementia-friendly and mental health- friendly communities • developing volunteering, including people who might not ordinarily volunteer • mobilising peer support • intergenerational support in neighbourhoods	 Opportunity to retain and build upon digital opportunities to keep connected, which have been positively received, but to add to people's choice and not to replace more traditional means of engagement Harnessing people motivated to volunteer by COVID-19 to continue after the outbreak Supporting and bringing coordination to the community and neighbourhood activity that has sprung up to help people feel connected

Role of council working with local partners	and address	Adjustments to local actions that may be required as a result of COVID-19 and opportunities to embed positive changes
4. Gateway services are broad services like transport, technology, spatial planning and housing, which make it easier for communities to come together	 Examples include: identifying options for affordable and accessible transport age-friendly driving and parking considering social networks as a public health issue when considering major planning developments technology increasingly being used to help people build and maintain social connections 	 Consider the safe and appropriate role of gateway services in addressing loneliness and social isolation as restrictions are eased Messages may be required to help people overcome anxieties about re- engaging in community activities when it is safe to do so
