Place-Prioritisation List

Should the fund being oversubscribed, we will be ranking projects through a two-stage approach. The first stage of this score is through a place-based score and subsequently through an assessment of a bid's strategic case, innovation and PSED considerations. These elements will each make up 50% of an applicants competitive score.

Below outlines the approach to calculating the place-based element of the assessment:

a. **Index of Multiple Deprivation (2019):** the proportion of lower super output areas in a council that are in the 10% most deprived lower super output areas nationally as per the Index of Multiple Deprivation 2019 – a widely used way of measuring deprivation. This enables the identification of areas with particularly concentrated deprivation that will benefit from holistic regeneration to address complex problems and provide a new economic purpose.

b. **Gross Value Added per hour worked (£, 2019)**: This widely used labour productivity measure enables the identification of areas that are performing less well economically than other parts of the country, and which will benefit from regeneration that creates spaces fit for the modern economy.

These two metrics have been weighted 75%:25% in favour of the Index of Multiple Deprivation and ranked. Subsequently, this ranked list was used to calculate the below corresponding score between 0 – 50

For those authorities who have been through Local Government Reorganisation, please refer to your geography as of 31st March 2023.
